Badge® X2 Fungicide/Bactericide is now OMRI listed for use in organic production

Morrisville, N.C. – Badge® X2 Fungicide/Bactericide has just been listed by the Organic Materials Review Institute (OMRI) for use in organic production. In addition, Badge X2 is certified by the USDA National Organic Program use in organic crop production.

OMRI Listed certificates are issued to suppliers of products that have successfully completed the OMRI Product Review process and been assigned an OMRI status of either Allowed or Allowed with Restrictions. Badge X2 is determined by OMRI as Allowed with Restrictions for use in the Generic Material Listing: Coppers, fixed, Class: Crop, Pest, Weed and Disease Control.

With its patented combination of copper hydroxide and copper oxychloride, Badge® X2 provides quick and long lasting control of a broader range of diseases utilizing less copper than any other copper fungicide. This technically advanced approach provides outstanding disease control while helping to reduce copper phytotoxicity and soil buildup.

Like all Isagro copper products, Badge X2 contains bio-optimized copper particles and co-formulants, which help improve spray coverage and rainfastness. Badge X2 is formulated as a water dispersible granule (WDG) giving it optimal handling and mixing characteristics compared to other formulations.

With more than 100 years of experience, Isagro is recognized as a pioneer in copper technology innovation and is a global sales leader.

For more information about Badge® X2 Fungicide/Bactericide and other Isagro USA crop protection products, visit the Isagro USA website at www.Isagro-usa.com.

Isagro USA, Inc. is headquartered in Morrisville, NC (Research Triangle Park) and is a subsidiary of Isagro SpA, based in Milan, Italy. Isagro SpA is a global discoverer, manufacturer, formulator and marketer of crop protection products.
