Badge® X2 fungicide/bactericide receives California and Florida registration

Morrisville, N.C. – Badge X2 is now registered in California and Florida (other states pending), paving the way for introduction in both states in 2009. Badge X2, is a unique and innovative copper-based fungicide/bactericide designed to help control a wide variety of fungal diseases including powdery mildew, walnut blight, citrus canker and angular leaf spot. Badge X2 is certified by the USDA for organic production.

Badge X2 with its patented combination of copper hydroxide and copper oxychloride provides quick and long lasting control of a broader range of diseases utilizing less copper than any other copper fungicide. This technically advanced approach provides outstanding disease control while helping to reduce copper phytotoxicity and soil build-up.

Like all Isagro copper products, Badge X2 contains bio-optimized copper particles and co-formulants, which help improve spray coverage and rainfastness. Badge X2 is formulated as a water dispersible granule (WDG) giving it optimal handling and mixing characteristics compared to other formulations.

With over 100 years of experience, Isagro is recognized as a pioneer in copper technology innovation and is a global sales leader.

For more information about Badge X2 fungicide/bactericide and other Isagro USA crop protection products visit the Isagro USA website at www.Isagro-usa.com.

Isagro USA, Inc. is headquartered in Morrisville, NC (Research Triangle Park) and is a subsidiary of Isagro SpA, based in Milan, Italy. Isagro SpA is a global discoverer, manufacturer, formulator and marketer of crop protection products.
